DECEMBER, 2025

EUROPEAN NETWORK OF SOC NEWSLETTER #1

The **European Network of Security Operations Centers** (ENSOC) project has officially debuted earlier this year, with a strong effort across all areas of activity, including platform development, testing, architecture, and communication. Below, you can find the most important details about the milestones that were already met, as well as upcoming news & updates!

Project Coordinator - Foreword

"In an era where cybersecurity threats grow in both volume and complexity, multilateral resilience has become of utmost importance. The Security Operations Centers that are the European Union's shield against cyber attacks must, hence, be in constant cooperation, collaboration and synergy in order to deflect incoming threats and keep the EU safe for each and every citizen. We understand this responsibility in its entirety and aim to craft the ENSOC platform so as to meet these objectives."

-Centro Nacional de Inteligencia (CNI)

Technical Milestone - What Is Done So Far

The ENSOC consortium is progressing with the iterative development of the Minimum Viable Platform (MVP), following the agreed multi-sprint roadmap. In 2025 and early 2026, the project roadmap foresees iterative cycles of build, integration, and testing to develop the core functionalities of the ENSOC MVP. The MVP will form the first operational version of the ENSOC solution, enabling partners to share, enrich, and filter cyber threat intelligence (CTI) data within a controlled environment.

These activities are supported by the project's technical teams, who contribute to the design, validation, and refinement of the platform across the various development stages. The roadmap is designed to validate technical requirements, ensure alignment across components, and prepare the system for demonstrations.

Upcoming - Website Launch

We are excited to announce that the official showcase website for ENSOC is currently in active development and will be launched at the beginning of 2026. The website will be the primary platform for longform and technical content regarding our project and its role in the European cyber defense ecosystem.

Upcoming - Member States & Tools Highlight

During the following months, we are launching two new content series on LinkedIn:

- Member State Highlight, where we will showcase the individual contribution of each Member State for the ENSOC project;
- Tool Highlight, where we shine some light on the individual moving parts of the future ENSOC platform, explaining their relevance within the broader framework of cyber resilience.

Thank you for your interest in ENSOC, and stay tuned for more information soon!
